PROVEN PERFORMANCE THAT SETS THE INDUSTRY STANDARDS

Edwards EM series two stage oil sealed rotary vane vacuum pumps are renowned for their high ultimate vacuum, rapid pumping speeds, quiet operation and ability to handle water vapour. A comprehensive range of accessories is available to allow their use on the widest variety of vacuum applications.

The standard "Industrial" models are suitable for most duties and are safe to handle non-flammable gases and vapours within the normal operating parameters of the pump. Flammable gases and vapors may also be pumped, provided they are outside the flammable range. Please consult Edwards for advice.

EM primary pumps may be supplied for use with PFPE oil. This enables them to be used in harsh (corrosive) processes, or where Oxygen will be present in high concentrations.

EM primary pumps (hydrocarbon oil only) may be supplied with ATEX classification either as part of a pump system or stand-alone. Please consult Edwards for more details.

The EM range of direct drive rotary vane pumps are inherently compact and vibration free, and with their finger-proof fan and coupling housings they offer excellent operator protection.

Edwards rugged two stage mechanical oil sealed pumps are available in sizes from 40 to 275 m³h⁻¹ 50Hz (30 to 180 ft³min⁻¹ 60Hz). Smaller models from 0.7 to 28 m³h⁻¹ 50Hz (0.5 to 19 ft³min⁻¹ 60Hz) are also available, ask Edwards for more details.

They feature:

- Advanced pressurised oil circuit to give effective lubrication even under high gas loads
- When the pump is switched off, the spring loaded distributor valve provides oil and air suck-back protection
- Gas Ballast control to assist in handling high water vapour loads
- Industrial roller bearings on drive shaft for ultimate reliability and long, trouble free life
- Full height oil sight glass for easy checking of oil level and condition
- Easy change oil filter, with oil filter condition gauge on larger models
- Central inlet port to allow easy mounting of mechanical booster pump if required
- Easy to maintain, with convenient service kits and international customer support.
- A wide range of accessories to match your application needs
- The pumps and accessories can be supplied either as individual components or as fully systemised, factory-tested combinations.

Typical Applications:

- Vacuum metallurgy processes
- Thin film coating technologies
- Pharmaceutical freeze drying
- Refrigeration and air conditioning system evacuation, drying, and backfilling
- Transformer and cable drying and impregnation, insulating oil treatment plant
- Lamp manufacture
- Cryogenic vessel evacuation
- Vacuum drying and distillation in chemical industries
- Semiconductor device manufacture
- Backing pump for high vacuum applications

SYSTEMS CAPABILITY

Our comprehensive range of mechanical booster and oil sealed rotary pumps forms the basis for the manufacture of factory-tested combination pumping systems. These systems have displacements from 310 to 4140 m³h⁻¹ 50Hz (220 to 2935 ft³min⁻¹ 60Hz).

Edwards rotary pumps are specifically designed with centrally placed inlets, so that the mechanical booster pump can be mounted on the backing pump with minimum overhang, to give a very compact arrangement.

The pannier-style outlet accessories together with the absence of gas-lines and pressure switches contribute further to the neat, compact designs.

The combination systems can be supplied complete with on-line starters for each pump. These are configured so that the mechanical booster pump cannot be switched on before the rotary pump, and so that both pumps are switched off together.

PUMP ACCESSORIES

Industrial oil sealed pumps are used in a wide variety of applications and produce reliable vacuum for many processes. To optimize the installation and to prolong pump life, Edwards offers a range of accessories for our large oil-sealed pumps. Our pumps and accessories are designed to ensure that accessories are easy to install.

We offer inlet and exhaust traps and filters, together with external oil filtration and oil pressure monitoring, pump temperature control and vibration isolators.

Spares

A range of spares including flanges, cords, tubings, oils, fluids, sealants and greases are available to ensure the smooth running of your pump.
